Sony has released a new Android tablet that it calls the Slick. The Slick is Sony's first Android tablet in the Play line of products and shares many of the same specs as Sony's latest flagship smartphone, the Xperia Z3. This latest device will cost $249 for the 32GB model, $299 for the 64GB model, and $349 for the 128GB model. Unfortunately, the Slick is set to be a very limited release. The Slick is set to ship later this month in the US with an expected release date of March 16, with Verizon, AT&T, T-Mobile, and Sprint slated to carry the Slick. There's no mention of the Slick being released internationally. Here's the full spec list for the Slick: 5.2-inch 1080p display 1.8GHz quad-core Snapdragon 615 processor with Adreno 405 GPU 2GB of RAM 16GB of internal storage 13-megapixel rear camera, 5-megapixel front-facing camera 8.55mm thick I've been told that the Slick is meant to be a premium device, so what are the spec differences between the Slick and the Xperia Z3? First, the Slick uses the Snapdragon 615, not the octa-core Snapdragon 801 chip used in the Xperia Z3. The reason for this is a mystery, but it does make the device just a tad less powerful than the Xperia Z3. The Slick does have a slightly smaller battery than the Xperia Z3, however, with the Xperia Z3 having a 3250mAh battery and the Slick having a 2700mAh battery. The Slick is also a little thinner than the Xperia Z3. The Xperia Z3 is a very powerful device, with its quad-core processor and 3GB of RAM giving it Android 5.0 Lollipop on the Xperia Z3, along with a HD display and a blazing fast 20.7-megapixel camera on the rear and a 5.1-megapixel camera on the front. In terms of hardware, the Slick is in line
