Q: Using a separated.jar on different platforms I developed an application and I want to distribute it to some friends. I've an unique.jar file for the client. But I need to split it to two.jar files to be able to run on Linux and Windows (It's possible with the maven and the ant tools). Is it the good way? Is it possible to split a.jar file in two.jar files? Thank you. A: No, it's not possible to split a.jar file in two.jar files For Windows, you'll need to have at least one manifest file in the.jar file that will associate each.class in the.jar file. And if you

use Java 7, you'll also be able to use javapackager utility, maybe you could try it Q: Inconsistent Data in using Order By with multiple tables I have the following data in SQL Server 2012, but I am trying to do a very simple Select statement to sort the data by "date" first and then "amount" next. The data table appears to be returning the wrong date/amount combo for the specified date. I created the following tables: DECLARE @T AS TABLE (DATE DATE, ACTUAL DOUBLE, PROGRAM DOUBLE, DATE2 DATE) DECLARE @PROGRAMS AS TABLE (ID INT, NAME VARCHAR(100))

DECLARE @PROGRAMS_DATE AS TABLE (PROGRAMID INT, DATE DATE) INSERT INTO @T (DATE, ACTUAL, PROGRAM, DATE2) VALUES ('2012-01-01','3.35','1011','2012-01-01'), ('2012-01-01','5.85','1011','2012-01-02'),('2012-01-01','2.83','1011','2012-01-01'), ('2012-01-01','2.44','1011','2012-01-01'),('2012-01-01','6.45','1011','2012-01-01'),('2012-01

Q: Postgres lcd on varchar fields I want to change the lcd of a field to 3 characters, and

then reset the lcd to 2 characters on a field. I tried the following in the db ALTER TABLE t_mytable ALTER COLUMN fld1 SET NOT NULL DEFAULT ('test') ALTER COLUMN fld1 SET lc_fld1 TO (length(fld1)+3) ALTER COLUMN fld1 RESET lc_fld1 TO (length(fld1)-2) That causes the following error: ERROR: syntax error at or near "lc_fld1" LINE 14: ALTER COLUMN fld1 SET lc_fld1 TO (length(fld1)+3)... A: You can do this using only one statement: ALTER TABLE t_mytable ALTER COLUMN fld1 SET NOT NULL DEFAULT 'test' ALTER COLUMN fld1 SET lc_fld1 =

COALESCE(fld1, 'test' || 'test' || 'test') TO (COALESCE(fld1, 'test') || (length(fld1)+3)) RESET lc_fld1 TO COALESCE(fld1, 'test') Notice I used to concatenation instead of + and || operators. Please, be careful of this one: The ternary operator should not be used to specify NULL values, unless an aggregate function is used. PostgreSQL releases have run into many cases of people using it to specify NULL values, which just makes life harder, as the ternary operator can always return NULL, and can also return a different type of value. Read: Is there a difference between null and empty string in sql? I'm pretty sure I'm not the only

one who was thrilled to see that IMDB also went from "Indiewire" to "Indieweb" [1] [1]: [
