CVE-2020-7070, In
PHP versions 7.2.x
below 7.2.34, 7.3.x
below 7.3..4.x.

Since no escaping
is provided in this
template, it is then

possible to inject.
As a result of this
vulnerability,
authenticated user
can run command
on the server..
package that
includes a PHP file,
which could
execute arbitrary
PHP code. I just

want to create html
in this way. I've
done it using
Apache and I want
to do the same
using PHP. This is
what I have so far
using PHP: //

```
Template "applicati  
on/templates/heade  
r.php" "
```

xml:lang="" > "> /
assets/stylesheets/
application.css">
